NOAM MAMAN

Data & Analytics Leader · Growth Analytics, Marketing Data Platforms & AI in Production

noammaman17@gmail.com · Based in Israel · Able to legally work in Europe and Latin America · althia.org

Data and analytics leader with 4+ years building self-service platforms, growth analytics, and production AI systems. Owns Placer.ai's marketing data and BI stack — ingestion, governance, and the funnel and attribution analytics the CMO and RevOps use to run the business. Ships LLM features in production with tested guardrails, not prototypes.

CORE SKILLS

Growth & Revenue Analytics: Funnel & multi-touch attribution, pipeline/revenue tie-back, RevOps data governance, CMO reporting cadence

Marketing & RevOps Data: Salesforce, HubSpot, LinkedIn Ads, GA4, Google Search Console, Bing Webmaster Tools

AI in Production: LLM feature pipelines, guardrail design & testing, AI analyst/report-generation agents, AEO, Cursor, Claude Code

Data Platform & Engineering: Databricks (Unity Catalog), Python ETL, BigQuery, Airflow, SQL, data validation (Great Expectations, pointblank)

Infrastructure (operate within): Terraform (Atlantis), HashiCorp Vault, Jenkins CI, Kubernetes, Git/GitHub PR workflow

Tools & Dashboards: Tableau, Hex (interactive data apps), executive dashboards & self-service tooling

EXPERIENCE

Senior Marketing Insights Analyst — Placer.ai June 2022 – Present

- Spotted a manual, one-off script and rebuilt it into the **Return to Office Index** — a permanent, automated tool now a public industry benchmark.
- Architected and led the technical build of three freemium analytics products — **Placer 100, Industry Trends, Migration Trends** — now standard retail-performance benchmarks.
- Built Hex into the self-service platform Placer's analysts and content writers use to pull complex data with parameters instead of SQL — infrastructure other teams run on daily.
- Own the full marketing data stack: ingestion pipelines for **Salesforce, HubSpot, LinkedIn Ads, GA4, Search Console, Bing Webmaster**, delivered on the team's Terraform/Vault/Jenkins/Kubernetes platform and governed through a Databricks Unity Catalog layer, feeding the dashboards leadership uses daily.
- Built the CMO's **MQL → meeting → qualified → closed-won** funnel dashboard on Databricks: multi-touch attribution, pipeline/revenue tie-back, deal size, and time-to-close.
- Defined MQL and attribution criteria with RevOps, validated against Salesforce field history, and aligned deal-to-lead attribution with RevOps's 90-day rule — replaced several conflicting definitions with one documented standard.
- Shipped LLM features in production: a guardrailed win-back email personalization pipeline, an ABM pipeline for a commercial-real-estate pilot, and report-generation skills for the company's AI assistant. Building the AEO measurement layer and content-optimization agents.

Founder — Althia Studio (Independent AI Products) 2026 – Present

- Designs and builds end-to-end LLM content pipelines — generation, automated multi-pass evaluation, and TTS narration — with no engineering team.
- Shipped **Mythia** and **Senthia**, live consumer iOS apps on the Apple App Store, solo: product, content pipeline, audio production, and full App Store submission.

EDUCATION

M.Sc. Business Analytics, Brandeis International Business School Honors · GPA 3.9

Statistical modeling, forecasting, data engineering, and data storytelling. Sharfman Fellowship recipient.

B.A. Economics & Political Science, Brandeis University Magna Cum Laude · GPA 3.9
