NOAM MAMAN

AI Builder & Data Insights Lead · Automation, Analytics & End-to-End Products

noammaman17@gmail.com · Israel · Citizenship: Portugal / Chile / Israel · althia.org

Builder with 4+ years turning ambiguous business problems into working tools — from a manual script that became a company-wide automated industry benchmark, to self-built consumer apps shipped solo on the App Store. Works fluently with LLM and agentic tooling (Cursor, Claude Code), owns Python/SQL data pipelines end-to-end (Airflow, Databricks, BigQuery), and partners directly with product, operations, and business stakeholders to find the problem worth solving before building anything.

CORE SKILLS

AI & Agentic Dev: LLM workflows, AI agents, Cursor, Claude Code, prompt optimization & evaluation

Data Engineering: Python ETL pipelines, data modeling, Databricks, BigQuery, Airflow orchestration, Git

SQL & Analytics: Advanced SQL, KPI definition & benchmarking, forecasting, time-series analysis, data storytelling

Tools & Dashboards: Tableau, Hex (interactive data apps), executive dashboards & self-service tooling

EXPERIENCE

Senior Marketing Insights Analyst — Placer.ai June 2022 – Present

- Spotted a manual, one-off script and rebuilt it into the **Return to Office Index** — a permanent, automated, company-wide tool that's now a public industry benchmark.
- Architected and led the technical build of three freemium analytics products — **Placer 100, Industry Trends, Migration Trends** — now standard benchmarks for retail performance tracking.
- Own data products end-to-end: raw data → Python/SQL pipelines → KPIs → dashboards → a decision someone actually makes.
- Design and maintain Python ETL pipelines processing millions of records daily, with Airflow orchestration and automated data-quality validation — 100% data integrity on public-facing numbers.
- Build interactive Hex applications and executive dashboards that give non-technical product, GTM, and business stakeholders self-service access to data.
- Partner directly across product, operations, business, and engineering — translating messy, cross-functional problems into something buildable, and complex data back into decisions for C-suite and non-technical audiences.

Founder — Althia Studio (Independent AI Products) 2026 – Present

- Design and build end-to-end LLM content pipelines — generation, automated multi-pass evaluation, and TTS narration — with no engineering team, from architecture decisions to production.
- Shipped **Mythia** and **Senthia**, live consumer iOS apps on the Apple App Store, solo: product, content pipeline, audio production, and full App Store submission.
- Every build decision — what to automate, what to hand-check, where to draw the line on quality — made and owned independently, start to finish.

EDUCATION

M.Sc. Business Analytics, Brandeis International Business School Honors · GPA 3.9

Statistical modeling, forecasting, data engineering, and data storytelling. Sharfman Fellowship recipient.

B.A. Economics & Political Science, Brandeis University Magna Cum Laude · GPA 3.9
